YEARview:

2013 Annual Report

Message from the President

Thomas Clark
2013 KCFC President
Territory Manager
Eaton Corporation

2013: Looking Back in the Year-View Mirror

You are never too old to set another goal or to dream a new dream.
C. S. Lewis

That quote should be a shining example to all of us, even though the KCFC has been in operation in the State of Kentucky for 20 years, Melissa Howell the Executive Director has been providing insights, information, and ingenuity in the field of clean fuels since its inception.

2013 was a banner year for the Kentucky Clean Fuels Coalition. This past year we have seen the growth of LNG/CNG technology in diesel trucks; we provided the Department of Energy with the final numbers for fuel savings on the Kentucky Hybrid School bus project and everyone involved believes that the project was very successful, one of our own Mercer Transpiration, received the Greenest Corporate Fleet Award by U.S. Department of Energy Clean Cities and have helped launch propane buses in several different areas in Kentucky including Mammoth Cave.

It has been my pleasure to serve this past year as the President of this wonderful organization and I wish Melissa Howell and the KCFC another great and bountiful 20 years.

Information Superhighway

The Kentucky Clean Fuels Coalition works to provide its members, as well as fleet, fuel, and transportation professionals with the latest industry information.

Our website has a number of fleet and clean technology resources to help drive the “clean fuel” efforts of our Kentucky fleets forward. Last year the site had more than 12,000 visitors.

KCFC also publishes a bi-weekly electronic newsletter to keep industry leaders abreast of the latest resources, news and KCFC accomplishments.

Fans and members read and share the latest KCFC news on Facebook, Twitter and youtube channel:

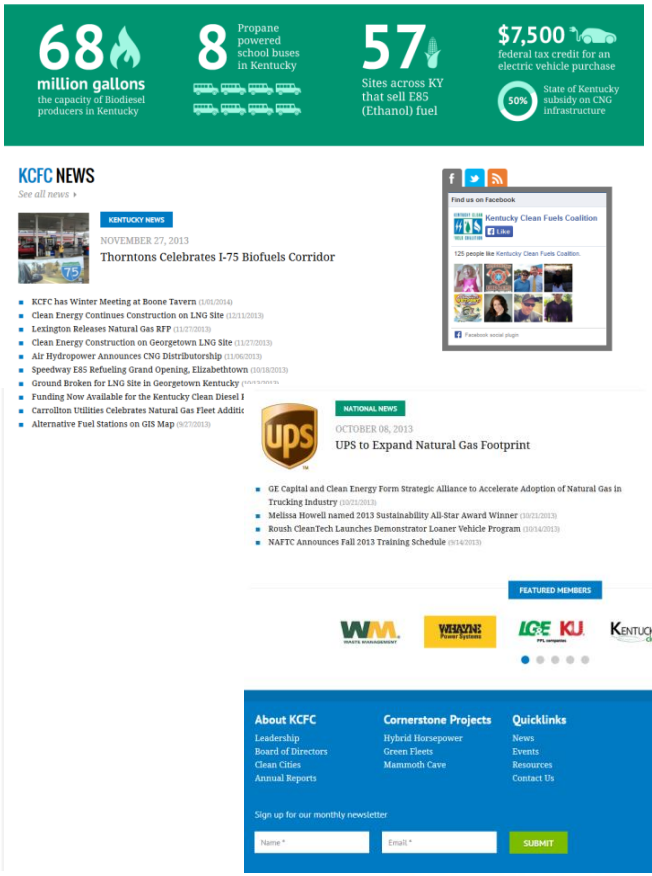
2013 Website Redesign

In Fall 2013, KCFC celebrated the launch of our new website. In addition to updating the website design and content, we integrated member stories, testimonials, and videos.



KCFC PROGRAMS

Hybrid Horsepower for Kentucky Schools

In December 2013, the Kentucky Clean Fuels Coalition completed the final phase of its four year Hybrid Horsepower for Kentucky Schools project. The project replaced 156 aging diesel school buses across Kentucky with new hybrid-electric school buses with an average of 35% greater fuel efficiency. The project resulted in a large publicly available dataset tracking the monthly mileage and fuel used by each hybrid bus across a variety of topographies and urban and rural routes; multi-disciplinary hybrid-electric school bus elementary and secondary education curricula; training programs for first responders, drivers, and technicians; and real life bus and hybrid system performance experience that can be leveraged by manufacturers to improve future performance.

The project has collectively saved almost 200,000 gallons of fuel and saved school districts over $740,000. These fuel savings are expected to continue over the fourteen year life span of the vehicles. The Hybrid Horsepower for Kentucky Schools project has logged over 4 million hybrid miles and provides a wealth of information for future hybrid-school bus deployment efforts across the nation.

KENTUCKY CLEAN FUELS COALITION

www.kentuckycleanfuels.org

HYBRID HORSEPOWER FOR KENTUCKY SCHOOLS

The Hybrid Horsepower for Kentucky Schools project was funded by the U.S. Department of Energy. It was executed in partnership with the Kentucky Department of Education, Kentucky Clean Fuels Coalition, Eaton, ThomasBuilt Bus, International Bus, and the National Energy Education Development (NEED) project.

The Hybrid Horsepower for Kentucky Schools project is a KCFC Cornerstone Project. For more information visit: www.kentuckycleanfuels.org/projects/hybrid-horsepower/

E85 Refueling & Ethanol

With assistance from KCFC and the Kentucky Corn Growers' Association, public fuel retailers continued to install E85 (85% ethanol and 15% gasoline) fuel dispensers across the state of Kentucky.

KCFC directs retailers to grants and funding assistance to subsidize pump installation. The Kentucky Corn Growers' Association provides retailers up to $5,000 per dispenser. Incentives and a willingness to give consumers choices at the pump continue to encourage more pump placement.

This past year, 14 new stations were added and Kentucky Corn Growers' Association provided funding to 10 of these stations. All of the new stations opened in 2013 are owned and operated by Speedway and Thorntons.

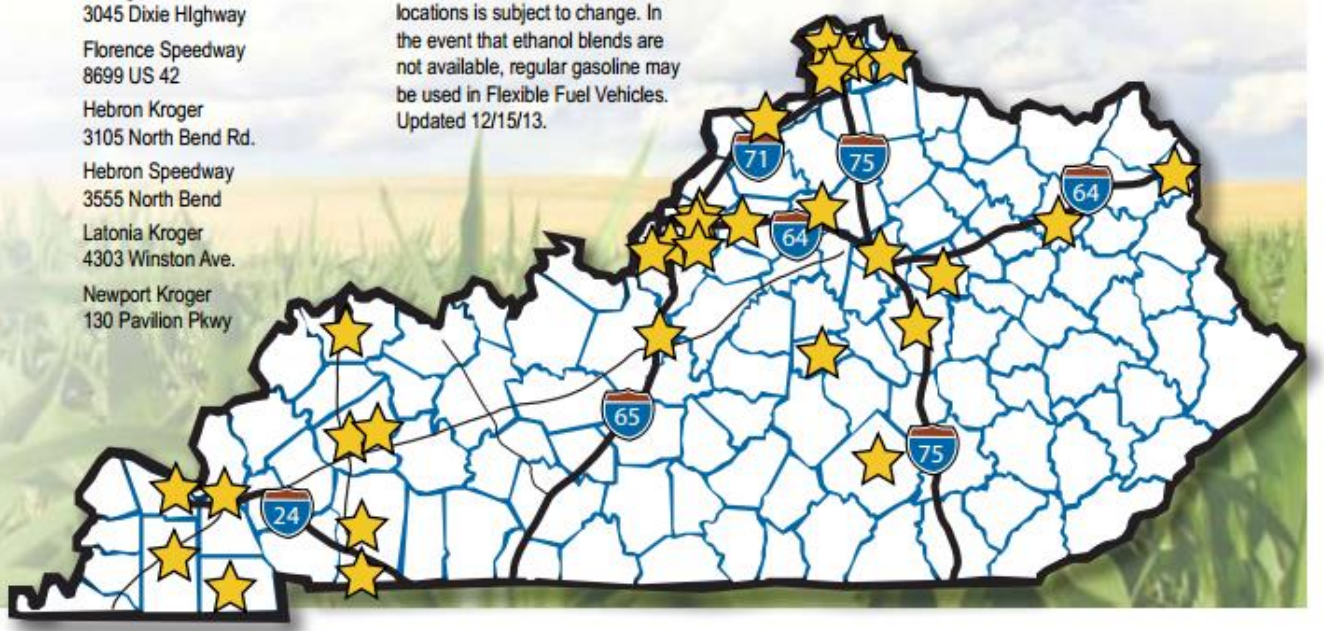
Ethanol availability at refueling locations is subject to change. In the event that ethanol blends are not available, regular gasoline may be used in Flexible Fuel Vehicles. Updated 12/15/13.

For a listing of E85 and Ethanol-blended fuels across the nation, visit www.E85refueling.com, or for listing of available Flexible Fuel Vehicles visit www.E85fuel.com. For current prices, see www.E85prices.com.

Turning American corn into America's energy.
It's renewable, efficient, abundant and safe.
And it creates American jobs.
Corn farmers feed the world; they can fuel it, too.

Ethanol. Now is the time.

Corn Growers' Association
KENTUCKY
www.kycorn.org



Natural Gas Developments

In September, Carrollton Utilities opened Kentucky's third public CNG refueling station.

In December, Clean Energy opened Kentucky's first public LNG refueling station in Georgetown, KY.

In 2013, Lexington-Fayette Urban County Government released an RFP for compressed natural gas fueling services. CNG refueling will serve the eleven CNG refuse haulers ordered in the 2nd quarter of 2013, which are due to arrive in March 2014 and May 2014.

PERC
Awards Funding to Mammoth Cave National Park

With an estimated donation of about $70,000 from the Propane Education & Research Council (PERC), Mammoth Cave National Park will be able to add four John Deere mowers, one water heater, two portable generators (one LP3250 and one LP5500) and a new dispensing station. All Propane!

Green Fleets of the Bluegrass

GREEN FLEETS
OF THE BLUEGRASS

KCFC's Green Fleets of the Bluegrass Program was launched in 2011 and aims to improve the environmental performance of vehicle fleets across Kentucky by reducing petroleum fuel use.

The program is structured to provide flexibility for diverse fleets across the Commonwealth to pursue best practices while achieving recognition for successes along the way. Participating fleet managers complete an online survey once per year to submit quantitative data and descriptions of fleet activities.

Participating fleets were recognized at the December 17th Winter KCFC Meeting.

EV Team

In 2013 the Kentucky Clean Fuels Coalition redesigned its website to provide information on the basics of electricity as a fuel, where to find different types of electric vehicles, information about charging, available incentives, highlighted projects, and the environmental impact of driving vehicles fueled from the Kentucky's current electricity grid. In 2013 KCFC hosted Plug-In Leadership Team meetings made up of diverse stakeholders working to provide the best available information and strategic recommendations for EV's in Kentucky.

Exploring the open road with natural gas vehicles.

Natural gas is an economical, efficient and low-emission alternative fuel choice. That's why at LG&E and KU, we're proud to have added a natural gas-powered vehicle to our fleet. Using this clean, domestic and low-cost fuel for our day-to-day operations is just one more way we're planning for the future. Our energies go to serving you.

LG&E® KU®

PPL companies

Last year we generated enough energy to power over one million homes.

Thanks to you.

Find out more at ThinkGreen.com

Green energy can come from a surprising source. Us.

You've heard of wind and solar power, but landfill-gas and waste combustion are two other beneficial and environmentally responsible alternatives to fossil fuels. With your help, we can continue expanding their viability. By 2020, we hope to power over two million homes from what we used to simply throw away.

M & M Cartage and Kentuckiana cleanfuel

In June, M & M Cartage announced plans to invest $7.5 million in building materials and capital equipment, allowing for the construction of a new headquarters with green efficiencies and the addition of 31 new trucks powered by compressed natural gas. The site will also include a CNG refueling station installed by Kentuckiana cleanfuel. To accomplish the goal, the Commonwealth of Kentucky awarded M&M Cartage $800,000 in economic incentives to spur this investment which will lead to 45 new Kentucky-based jobs by the end of 2015.

Photo includes (left to right): Don Hayden, President M&M Cartage at the podium, Louisville Metro Mayor Greg Fischer and Dr. Len Peters, Secretary of the Kentucky Energy and Environment Cabinet.

Behind the Scenes

Melissa Howell has led the KCFC since 1993, with the governance of Officers and a Board of Directors elected annually. She was honored with the U.S. Department of Energy Pioneer Award for twenty years of service.

Emily Carpenter's primary role for KCFC is to analyze and identify natural gas industry barriers and needs and establish and manage partnerships with secondary institutions.

KENTUCKY CLEAN FUELS COALITION

Emily Chandler is responsible for managing Hybrid Horsepower for Kentucky Schools bus data, developing and managing the Green Fleets of the Bluegrass program, facilitating Plug-In Kentucky plug-in electric vehicle efforts, and other special projects.

For KCFC Lizzy Gardner is responsible for various administrative tasks, working with our social media outlets and website, and managing our partnership with Mammoth Cave National Park.
